

# Balance Your Home With BioGeometry

Utilize the principles from this ancient Egyptian science

to balance the quality of the energy in your home

TEXT TERENA THYNE

**F**eng shui brought attention to the importance of placement in the world of energy. Now BioGeometry® utilizes nature's own design language to balance the energy in a work environment or home. BioGeometry is a patented science, developed over 30 years of intensive research by the prominent Egyptian architect and scientific researcher Dr. Ibrahim Karim.

Feelings of discomfort in a room and even restless nights can be attributed to being on a radiation grid line or other invisible energy fields. Dr. Karim's first application was to use a BioGeometrical shape placed at the head of a bed, which provided better sleep no matter where the bed was placed in a room. The BioGeometrical energy shapes—tiny metal forms—are usually hidden from view behind a molding or on the back of a mirror or picture frame.

These geometrical shapes such as pyramids and domes, create balanced energy and counteract any negative energy that comes from a variety of sources, including the earth's radiation, underground utilities, modern appliances, or even electrical wiring. "BioGeometry is known for transforming the quality of life for the people living and working in the area where it has been applied," explains Dr. Gilbert, a U.S.-based practitioner of BioGeometry trained by Dr. Karim. "The effects from this energy balancing are felt on multiple levels—

## A feeling of serenity....

Although it is still in its infancy in the United States, BioGeometry is a growing trend with proven scientific benefits. Michael Keith is a New York-based interior designer and is the first U.S. designer to officially introduce BioGeometry into the United States. "I have seen BioGeometry change peoples lives," he explains. "If someone's home is on a negative fault line, then they will feel extremely negative reactions physically—ranging from insomnia to severe illness." People who live or work in environments utilizing BioGeometry report more positive energy accompanied by a feeling of serenity.

Those interested in learning more about BioGeometry training or resources in North America can visit [www.vesica.org](http://www.vesica.org) or [www.michaelkeithdesign.com](http://www.michaelkeithdesign.com). ■

Global denizen Terena Thyne regularly writes travel, design, and lifestyle feature articles for a variety of publications, including *Harper's Bazaar*, *Coast*, and *Variety*. When she isn't continent hopping, Terena can be seen on *Current TV* where she is a contributing producer.

⊕ A BioGeometrically balanced room is not only beautiful, it feels serene.

with common reports coming to us of profound shifts on the physical, energetic, emotional, mental, and spiritual levels."

BioGeometry practitioners like Dr. Gilbert are able to measure the quality of energy in a room using a virtual cone or pendulum that detects different energy qualities. They essentially conduct an energy analysis of the home or office. Places of harmful energy concentrations are identified, and the grids of geopathic (Earth) radiation are mapped out in the space. These detrimental energy qualities are then transformed into balanced energy through specific applications and, in sites of extremely high concentration of harmful energies, they relocate a person's bed or desk away from the toxic radiation source.
